

Lincoln Announces New, Upgraded UL Listed Air Operated Diaphragm Pumps

In line with Lincoln's continuous efforts to offer its customers the best pump technology value, we are pleased to introduce upgraded UL Listed Air Operated Diaphragm pumps. The new pumps have higher flow rates, greater solids handling capability and standard features like the no-lube air valve and grounding wire. Both pumps feature 1" inlet and outlet, vs. 1" inlet, 3/4" outlet of the old design.

Here are some of the key performance differences:

	<u>New</u>	<u>Old</u>
Maximum GPM (LPM)	45 (170)	37 (140)
Solids Handling	1/4" (6mm)	1/8" (3mm)

We offer two models. Both feature aluminum construction with a choice of Buna or PolyTetraFluoroEthylene (PTFE) wetted soft parts.

We are now shipping the upgraded models against all UL pump orders at the same price as the old. Along with the 2006 price adjustment, there will be a small increase on April 1. Here are the new pump models, referencing those they replace:

Model	Description	Replaces	2005 Price	April 2006 Price	Code
85634	1" Aluminum/Buna AOD Pump	84811	\$851.35	\$868.40	DP-
85635	1" Aluminum/PTFE AOD Pump	84812	\$1,132.90	\$1,155.60	DP-

The new models also appear in the 2006 price sheet.

Like all Lincoln pumps, the new UL pumps are fully serviceable. Check out the owner's manual and additional information on the new pumps in the password protected area of our web site www.lincolnindustrial.com. Contact Kenneth Walsh at 314-679-4255 for access assistance.

Good Selling,

Wayne Mitchell
 Sr. Product Manager
