

**Mityvac® MVA660 Power Steering Evac Adapter**

Mityvac now offers a new accessory to aid in removing trapped air from an automobile's power steering system. The MVA660 Power Steering Evac Adapter has a universal cone-shaped rubber body that adapts to the varying diameters of many automotive power steering reservoirs. It fits snugly in the neck of the reservoir to form an airtight seal when vacuum is applied. Simply install the adapter, connect a Mityvac hand vacuum pump, operate the pump to develop vacuum, then work the steering to loosen air bubbles so they can be drawn out.

The Power Steering Evac Adapter reduces bleed time following power steering repairs. It's a handy upgrade for any Mityvac hand pump kit and a must have tool for automotive repair shops.

Model MVA660 is currently available for purchase. For additional information on features and applications, and to download images, visit us at [mityvac.com](http://mityvac.com).
