

Maintaining Peak Performance – BDS

Bearing Dosage System for low-maintenance bearings

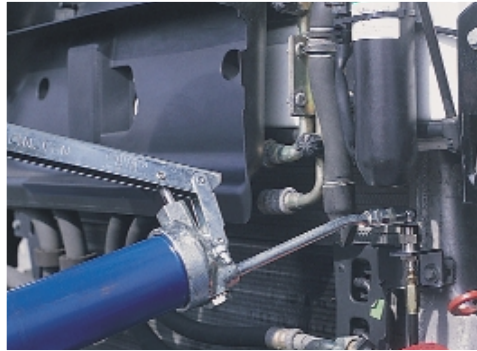

BDS –
The economical
solution for the remaining
lube points on your
DaimlerChrysler Actros

BDS: On-board centralized lubrication

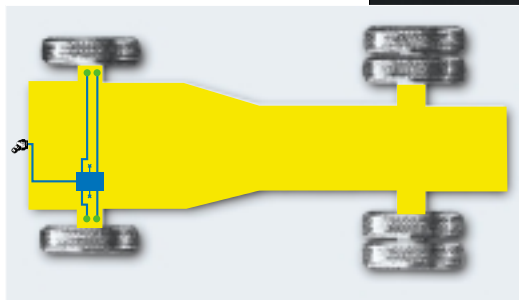

Trouble-free

All king pins (upper and lower) are easily lubricated from one single point located under the hood with any grease gun. Lube points which are normally difficult to access can now be serviced quickly and efficiently – guaranteeing consistent lubrication for every point.

Flexible

Depending on the environmental conditions, you can choose the proper lubrication interval without a tedious procedure. Frequent lubrication builds up a grease collar protection that prevents water and dirt from penetrating the bearing, preventing premature wear.

Retrofit

Peak performance resulting from professional lubrication is now available at an affordable price. BDS is available as a retrofit kit specially made for the Actros.

High-pressure plug-in fittings assure an easy and quick installation. BDS is also great for fifth-wheel applications. One great advantage – the trailer no longer has to be unhitched to grease the fifth wheel.

"BDS means that I can lubricate an Actros without going down into the pit."

Lothar Fichtl, service manager at Autohaus Kunzmann in Stockstadt, has been using Lincoln Industrial products for several years.
