

Get a complete brake bleeding solution in one convenient package from Mityvac

For all levels of vehicle maintenance, Mityvac offers the most complete line of vacuum brake bleeding equipment in the industry.

Choose from basic packages featuring reliable hand-operated pumps, to high-volume systems designed with powerful compressed air vacuums.

The components in each Mityvac kit are designed to work together and engineered to last, even under the toughest shop conditions.

What's the advantage of vacuum bleeding?

- ***Fast***
- ***Effective***
- ***Clean***
- ***Requires only one person to do the job***

Quick, efficient and cost-effective vacuum bleeding is now accessible and affordable for everyone.

The powerful Mityvac compressed air brake bleeder is the heart of our ultimate one-man bleeding system

Our compressed air bleeder creates a powerful vacuum capable of bleeding up to two quarts (1.9 liters) per minute. It features a variable thumb throttle and swivel air inlet, an automatic shutoff to prevent overfill and a quick change coupler for speedy accessory changes.

Model MV6838 Master Brake Bleed Kit

Our most comprehensive system. It combines our MV6830 compressed air bleeder with our clamp-on style master cylinder refill kit and our plate-style refill kit, for total coverage of all makes and models of vehicles and master cylinders.

Model MV6835 Brake Bleed Kit

Includes the MV6830 compressed air bleeder and a clamp-on style auto-refill kit designed to fit most single-chamber master cylinders.

Model MV6830 Brake Bleed Kit

Our most economical compressed air bleed kit features our powerful vacuum bleeder, an evacuation wand, brake bleed hose, hanging hook, three bleed screw adapters and three master cylinder refill plates.

Mityvac's master cylinder auto-refill kits put us in the forefront of convenience and performance

When vacuum bleeding or flushing a hydraulic brake or clutch system, if the master cylinder runs dry, air will be drawn into the system and the bleed process must be repeated. Mityvac's automatic master cylinder refill kits ensure the proper level of new brake fluid is maintained, and eliminate the time consuming process of returning to the master cylinder for replenishment.

Model MVA6836 Master Auto-refill Kit

The only refill system on the market combining the convenience of a clamp-on style refill bottle with the total application coverage of round and dual chamber vacuum plates.

Model MVA6832 Clamp-on Style Auto-refill Kit

Conveniently mounts on top of the master cylinder, and uses gravity to automatically maintain the proper level of new brake fluid.

Model MVA6834 Plate-style Auto-refill Upgrade Kit

Extends the applications of MVA6832 to include dual chamber and small neck master cylinders, as well as low clearance applications.

Mityvac completes their vacuum bleeding line with powerful hand-vacuum pumps and large-capacity fluid evacuators

Model MV6817 Superpump Brake Bleeding Kit

This Kit has everything included in the MVA6815, plus a master cylinder refill kit to automatically maintain the fluid level in the master cylinder during bleeding.

Model MV6815 Superpump Brake Bleeding Kit

This kit comes with everything you need for bleeding hydraulic systems, including an extra large 16 oz. (947 ml) reservoir with convenient hanging hook.

Model 06820 Brake Bleeding Kit

This complete kit provides an economical solution for smaller applications like bleeding brake lines of motorcycles and ATVs. It includes a pump, reservoir, tubes and bleed adapters.

Model 07300 PneumatiVac

Operates on compressed air to create a powerful venturi vacuum for draining fluids from tanks and reservoirs. Includes brake/clutch bleeding kit (Model 07205) for vacuum bleeding hydraulic brake and clutch systems.

Model 07201 Fluid Evacuator Plus

At the push of a button, this versatile unit changes from a fluid evacuator to a fluid dispenser. (Requires Model 07205 for vacuum bleeding of hydraulic brake and clutch systems.)

Model 07400 Fluid Evacuator

Vacuum is created quickly and efficiently by manual pump operation, offering superior mobility by eliminating the need for electricity or compressed air. (Requires Model 07205 for vacuum bleeding of hydraulic brake and clutch systems.)

Model 07205 Brake Bleed Conversion Kit

Covers the 07400 and 07201 into one-person vacuum hydraulic brake or clutch bleeders.
