

Lincoln is pleased to announce the release of three new Professional Rotary Fluid-Transfer Pumps. These multi-media pumps provide reliable, no-mess fluid dispensing.

The Models 1385 and 1385-H move oils, diesel, kerosene, coolant, non-corrosive materials, petroleum-based fluids, hydraulic oils and ATF while the Model 1387 offers the safety of FM certification for the transfer of gasoline.

All three pumps feature a graphite three-vane design for exceptionally smooth, uninterrupted flow and no-splash dispensing. The high-tolerance, micro-finished bore and vanes provide outstanding pump life. The pumps self-prime due to their outstanding vacuum.

The models 1385-H and 1387 include a professional super-duty, 8-foot, anti-static hose with a non-sparking aluminum nozzle and hanger.

Applications for these pumps are numerous including; agriculture, heavy equipment, trucking/transport, construction, automotive and industrial.

The pumps fit both 16-gallon and 55-gallon drums with 2-inch bungs and transfer 10 Gal/Min at 120 RPM with low-viscous fluids and 7 Gal/Min at 80 RPM with heavier oils.

List Prices:
