New Style 85598-400 lb/85599-120lb**

**Subject: Improved 120/230 VAC FlowMaster Pumps**

---

Lincoln is pleased to announce another improvement to our FlowMaster line of 120/230 VAC lubrication pumps. Effective immediately, the following changes are in effect;

Models **85588** and **85589** have been discontinued. They are being replaced with two new models, **85598** and **85599**. These new single phase models will have 120/230 VAC motors that are compatible with either 50 Hz or 60 Hz electrical current, whereas the 85588 and 85589 models could only operate with 60 Hz current. The change to 50 Hz/60 Hz operation will enable these AC FlowMasters to be used with virtually all electrical systems worldwide that use either 120 or 230 voltage.

Two additional enhancements to the 85598 and 85599 pumps are they are both rated for continuous duty operation and the gear ratio of the pump changes to 19:1, allowing the motor to draw less current in operation.

The list price of the new pumps remains the same as the former 85588 and 85589 - \$3,000.25

The service page for the new and improved FlowMaster pumps is form 402753. Please [click here](#) to see the page.

As always, if you have questions or concerns, please do not hesitate to call Lincoln Technical Services at 314/679-4200, Ext. 4782 or fax us at 314/679-HELP (4357).
