ORSCO® Continuous Spray System:

A True Innovation in Oil Lubrication Technology

The ORSCO Philosophy:

“The best approach to lubrication is to deliver the least amount of lubricant required. Anything else is wasted.”
**A True Innovation in Oil Lubrication Technology**

The major difference between ORSCO oil lubrication systems and other lubrication technologies is the use of a continuous, ultra-fine, non-mist delivery of lubricant. The ORSCO system can spray minute quantities of lubricant for a selected duration of time.

The ORSCO systems deliver minute quantities of oil, resulting in significant cost savings by decreasing lubricant consumption, reducing product contamination and eliminating under/over lubrication.

In critical applications where cleanliness is a must, the ORSCO system achieves exceptional performance.

The system is successfully used in Plastic Film, Textile, Food Processing, Baking, Automotive, Metal Stamping, fiberglass, Electronics, Can Decorating, Mining, Pulp and Paper, Machine Tool and many other industries.

---

**Eliminates the Too Much—Too Little Factor**

The ORSCO system lubricates more effectively than traditional cyclic lubrication systems or manual lubrication. With the ORSCO system you are always at the optimum lubricating range.

**Eliminates Contamination**

ORSCO’s patented, precision spray nozzles lubricate exactly where required with an accurate amount of lubricant to reduce product contamination. Unlike traditional oil mist systems, ORSCO’s spray technology eliminates environmental contamination typically caused by “stray mist.”

**Continuous, Consistent Spray**

ORSCO systems are capable of dispensing one drop of lubricant continuously for a period exceeding four minutes. No change in spray pattern occurs even after another drop of lubricant is injected.

This red dot is the actual size of a drop of oil (.03ml/0.002 cu in) the ORSCO system can deliver in a continuous consistent spray pattern up to four minutes.

**Dramatically Increases Life Expectancy of Lubricated Devices**

Percentage elongation (shown on the chart for chains) is maintained at a consistent low level, even after 3,000 hours of use. The result is five to ten times longer life expectancy of the lubricated devices.

**Up to 90% Lubricant Reduction**

If you calculate the actual amount of lubricant that is needed for a particular application, the majority of automated and manual lubrication systems over lubricate. Because ORSCO systems lubricate continuously with an ultra-fine, non-misting spray, only the exact amount of oil required to lubricate is used.
ORSCO Products and Services

**Series 150**
A standard and easy to install system for up to eight lubrication points with multiple variations to choose.

**Series 200**
A customized system that provides basic monitoring with unlimited lubrication points.

**Series 300**
An advanced engineered lubrication system with complete fault monitoring.

**Coaxial Delivery Systems**
Point of use lubrication delivery system for air tools, cylinders, pumps, guns, drills and motors.

**Services**
ORSCO design services are available for complex systems and for special applications. If necessary, ORSCO will custom design nozzles or systems specific to the particular application.

ORSCO has been part of the Lincoln Industrial product family since 1998.

ORSCO lubrication systems

- Extend chain life and reduce oil consumption
- Short-term return on investment (ROI)
- Cleaner conditions, less downtime and overall energy savings
The secret of the ORSCO series 170 is its unique ability to provide the right amount of lubricant, at the right location and at the right time, by delivering a small amount of lubricant on a continual and controlled basis. There are no worries about reliability or durability as the ORSCO series 170 has been tested at the maximum injector rate for millions of cycles.

The ORSCO concept

**Systems**
- VS and VSR series (OEMs – PLC)
- 170 series (Standard – timer)
- 200 series (Customized)
- 300 series (Fully monitored)

**Spray component**

- Delivery system
- Air line
- Oil line

**Standard spray nozzles**
- SWN, SFN, STN (Continuous)
- TPN, TFN, TCN (Pulse)

ORSCO system components

- Timer/PLC controls
- Reservoir
- Oil injector
- Spray nozzle
- Solenoid valve
- Air pressure regulator
- Air/oil mix

System air pressure [70 to 120 psi (4.75 to 8.1 bar)]

**Pulp and paper industry**

**Spray nozzle advantage: Cleaning effect**

Applying lubricant in a continuous fashion provides the best on-going continual maintenance for your chain and keeps all the moving parts as clean as possible, as shown.
Product features

A complete system
- Original equipment manufacturer (OEM) or installed on site
- Combines controls, valves stack and reservoir

High-output capacity
- Half drop (0.015 cc)
- Two drop (0.060 cc)
- Can deliver up to four drops per second (combined injector output) for large amounts of lubrication
- Available in both non-adjustable and adjustable versions

Compact and easy to maintain
- Manifold design, compact
- Can service part of assembly if necessary
- Easy to set up

Applications
- High-speed conveyors
- Baking and processing ovens
- Overhead conveyors
- Lubricate up to 16 points with one system
- Numerous control options
- Part lubrication
- Material coverage

Features and benefits
- Fixed volume delivery improves lubricant control
- High injector cycle rate (up to 1 Hz) can accommodate applications requiring large amounts of lubricant
- Three-piece reservoir design makes fluid levels easy to see and the component easy to clean and field repair
- Compact modular design with minimal external piping is ideal for OEM applications
- Patented spray nozzle design
- Easily adaptable modular package

Modular packages for OEMs and end-users

Valve stack (VS) series
The valve stack, the heart of the ORSCO family of lubrication products, comes standard with one control network per stack and feeds up to eight injectors. This is a great lubrication solution when matched with a customer’s programmable logic controller (PLC) and existing fluid source.

Note: Filter pressure switch is not standard with the VS series product.

VS series (non-adjustable)

Valve stack-reservoir (VSR) series
By adding a reservoir and a filter pressure switch, this package comes ready to work with a customer’s timer or programmable logic controller (PLC).

VS series (adjustable)

VSR series
Ideal for many industries

Series 170 system
A standard and easy-to-install system for up to 16 lubrication points with multiple variations to choose.

ORSCO series 200 and 300
Series 200 is available for custom solutions requiring over 16 points of lubrication.
Series 300 is for real-time pressure monitoring of lubrication system.
Customized oil spray nozzles
If necessary, ORSCO will custom design nozzles or systems specific to the particular application.

At ORSCO . . .
• We don’t make lubricants, we make lubricants work better!
• We don’t make chains, we make chains last longer!
• We don’t make machines, we make machines more productive!

Packaged systems

170 series
A standard and easy-to-install system for up to 16 lubrication points. Systems include an internal timer to control injector cycle rate. Note: Dual network indicates that half of the lubrication points are controlled by their own timer. Package includes appropriate number of spray nozzles of the type SWN-LP-NC-00-3, stainless steel nozzle mounting bracket and 25 ft. (7.6 m) nylon lines per lubrication point.

VSR series
ORSCO valve stack with reservoir and filter regulator/pressure switch. The system comes ready to work with a customer’s timer or PLC. Package includes appropriate number of spray nozzles of the type SWN-LP-NC-00-3, stainless steel nozzle mounting bracket and 25 ft. (7.6 m) nylon lines per lubrication point.

Note: Packaged systems are for continuous spray applications only.

The Power of Knowledge Engineering
Combining products, people, and application-specific knowledge, SKF delivers innovative solutions to equipment manufacturers and production facilities in every major industry worldwide. Having expertise in multiple competence areas supports SKF Life Cycle Management, a proven approach to improving equipment reliability, optimizing operational and energy efficiency and reducing total cost of ownership.

These competence areas include bearings and units, seals, lubrication systems, mechatronics, and a wide range of services, from 3-D computer modelling to cloud-based condition monitoring and asset management services.

SKF’s global footprint provides SKF customers with uniform quality standards and worldwide product availability. Our local presence provides direct access to the experience, knowledge and ingenuity of SKF people.

Other automated lubrication systems (ALS)

EOS system
A low-cost, economical system for precise metered quantities of oil to reduce chain and sprocket wear.

VSP system
A pneumatic-only controlled VSR made especially for applications prohibiting the use of electrical systems.

Custom controls
Custom controls designed to meet special application requirements.

Accessories
Spring-loaded bracket and other accessories such as fiberglass enclosures and stainless steel fittings available only from ORSCO.

ORSCO® Series 150

A Standard Packaged Lubrication Solution

The ORSCO Continuous Spray Lubrication Systems drop lubricant use up to 90% and help eliminate oil waste or air contamination.
ORSCO® Series 150

An Easy To Install System For Up To Eight Lubrication Points With Multiple Control Options Available

**System Features**

- Lubricates up to eight lubrication points
- Adjustable lubricant output volume
- One dedicated positive displacement injector per spray nozzle
- Viscosity range 100 to 2000 SUS/460 to 9200 CST
- System mounted remote from nozzles (up to 60 feet/18 m)

We designed our Series 150 as an engineered standard package. The Series 150 is simple to assemble and install, as well as easy to operate and maintain. With the different control options and nozzle quantities it is a flexible application oriented package.

**Control Options**

**C Option**: Customer controlled option with a terminal strip for connection to PLC, PC or machine control.

**T Option**: Incorporates the ORSCO TDR-11 timer module to control the injector timing for volume adjustment.

**R Option**: Incorporates the ORSCO TDR-11 timer module to control the injector timing. Timer relays are used to control spray cycle timing.

**Dimensions**

Size: 18.5" x 19.63" x 7.44"
470mm x 500mm x 190mm

**Power Options**

AC and DC power options.

**Nozzles**

ORSCO’s patented precision spray nozzles apply lubricant with a unique non-misting air-oil blend for maximum effectiveness. Nozzles are available as a standard or custom designed specific for special applications.

**Typical Applications**

- Chain Lubrication
- Fin Mill
- Light Assembly
- Conveyors, etc.

ORSCO® Series 200

Custom Designed Oil Lubrication Systems

The ORSCO systems are a long term financial investment for your applications. With a short return on investment, the ORSCO system is an ideal solution for your lubrication needs.
ORSCO® Series 200

A Fully Customized System
For Unlimited Lubrication Points

System Features
- Basic fault monitoring
- Unlimited lubrication points
- Lubricant volume adjustment capabilities
- Spray nozzles operate with regulated air pressure as low as 5 psi (.35 bar)
- Dispenses lubricant exactly where it’s needed—even hard to penetrate areas
- Continuous delivery or intermittent operation

The Series 200 system is a customized package designed for unlimited lubrication points.

Dimensions
Size: Varies per the number of nozzles required

Fault Monitoring
- Low oil reservoir fault
- Low air pressure for the system

Nozzles
ORSCO’s patented precision spray nozzles apply lubricant with a unique non-misting air-oil blend for maximum effectiveness. Nozzles are available as a standard or custom designed specific for the particular application.

Typical Applications
- Assembly lubrication
- Accurate, clean delivery of most fluids
- Chain lubrication, etc.

Technical Information
ORSCO, Inc.
Phone: 1-810-997-0300
Fax: 1-810-997-2072
The ORSCO Series 300 Lubrication System provides complete monitoring of both air and oil lines for 100 percent delivery verification.
ORSCO® Series 300

An Advanced Engineered Oil Lubrication System With Complete Monitoring Capabilities

System Features

- Unlimited lubrication points
- No limitations on spray direction
- No change in spray pattern, even when another drop of lubricant is injected
- Capable of dispensing one drop of lubricant continuously for over four minutes
- Full fault monitoring capabilities

The Series 300 System is the most advanced of the ORSCO systems available. This customized system allows ORSCO engineers to design to your specifications. The addition of a PLC gives the Series 300 the edge over other systems, allowing for complete delivery verification. With capability for unlimited lubrication points, the Series 300 can work with any application.

Dimensions

Size: Varies per the number of nozzles required

Fault Monitoring

- Reservoir level condition
- Low air/oil pressure in the line feeding the nozzle
- High air/oil pressure in the line feeding the nozzle
- Injector (pump) pressure spike verification

Nozzles

ORSCO’s patented precision spray nozzles apply lubricant with a unique non-misting air-oil blend for maximum effectiveness. Nozzles are available as a standard or custom designed specifically as required by the particular application.

Typical Applications

- Assembly operations
- Critical chain applications
- High speed spindles, etc.

ORSCO® Coaxial Systems

Precision Injector and Co-Axial Lubrication Assemblies

ORSCO systems are preferred for their reliability. When you have a job that needs to get done, ORSCO is the name you can trust for dependable lubrication.
ORSCO® Coaxial Systems

Consistent—Dependable—Reliable

System Features
- Point of use lubrication delivery
- High level of control
- Modular connectors for easy maintenance
- Central fill capability

ORSCO Coaxial systems provide oil injection for exact air tool lubrication.

Benefits
- Proper lubrication of air tools
- Consistent torque
- Decrease in air tool maintenance
- Decrease in housekeeping costs

Options
- Multiple air tool lubrication capabilities
- Suspension options (all tool rail types)
- Automatic or manual lubricant fill
- Standard or custom assemblies
- Hose selection options
- Tool end coupling type options
- Base assembly options

Applications
Single Point
- Air tools (short cycle)
- Cylinders
- Pumps
- Rivet guns
- Air valves

Air Logic Lubricator
- Grinder air motors
- Dye mixer motor
- Air powered drills
- Long running air motors (run longer than one minute)
